Given an array of integers, return **indices** of the two numbers such that they add up to a specific target

You may assume that each input would have **exactly** one solution, and you may not use the *same* element

Example:

Given `nums = [2, 7, 11, 15]`, `target = 9`,

Because `nums[0] + nums[1] = 2 + 7 = 9`,
return `[0, 1]`.

 Editorial Solution

C

</>

```
1  /**
2   * Note: The returned array must be malloced, assume caller calls free().
3   */
4  int* twoSum(int* nums, int numsSize, int target) {
5
6  }
```
